**Width** \_\_\_\_\_  
**Length** \_\_\_\_\_

## HOW TO MEASURE THE BELT

1. Tape one end of a length of string to the center of the belt as shown below.

2. Run the belt, allowing the string to travel around the transport. When the taped end returns, stop the belt and cut the string where it meets the taped end.

3. Remove the string from the transport and measure its length and fill out above. This is the length of your belt.
4. Measure the width of the belt and fill out above.
