

Fitting Instructions

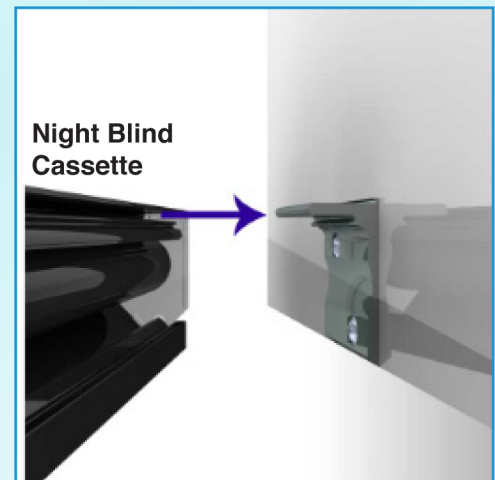

Systems 2800 & 2850 (face mounted) Cassette Night Blind

1. Hold the night blind cassette against the display case where you want it to be installed. Place marks on the display case to note this position.
2. The mounting brackets should be installed 70-100mm (3-4 inches) in from each end of the blind. For 6+ foot applications place a third bracket in the center. Hold the brackets in the appropriate place and mark the holes.
3. Secure the brackets to the display case with self tapping screws (3.9X13mm, self tapping, zinc, philips head, non countersinking).
4. Pull the blind out a few inches to allow the cassette cover to slide onto the brackets. Push the cassette forward until you hear a click and it locks in place. (See picture B)
5. To further secure the night covers to the plastic bracket, use a 13mm (1/2 inch) self tapping screw placed 6mm from the back of the cassette. (See picture C)
